

PHYSICAL ORACLE NETWORK

Signal Protocol The Reality Oracle.

Bringing offline retail, commodity, and consumer price data on-chain using Vision AI and consumer smartphone nodes.

DeFi is blind to 80% of economic reality.

Exchange-Only Oracles

Current oracles (Chainlink, Pyth) only monitor exchange order books and digital assets. They have zero visibility into real-world consumer inflation, FMCG retail prices, or fuel rates on the ground.

Emerging Market Data Lag

Official government inflation indices in developing economies (Nigeria, Kenya, Ghana) lag by 30 to 90 days. Emerging DeFi risk models and stablecoin purchasing power indexes lack real-time local truth.

Smartphone Cameras as Physical Oracle Nodes.

01

Capture

Community members snap local supermarket receipts and retail prices via Telegram with zero wallet setup friction.

02

Verify

Vision AI models parse line items, store coordinates, and totals while filtering forged photos or duplicate submissions.

03

Inscribe

Price hashes are inscribed permanently to the BOTChain L1 ledger with instant micro-reward settlements.

Built & Deployed on BOTChain L1.

Live Mainnet Contract

Address: 0x19ab0982C0ea2C4790Fcc0eA6b48e9F2dE017243

Chain ID: 677 (BOTChain Mainnet)

RPC: <https://rpc.botchain.ai>

Telegram Ingest Node

Bot: @OfficialSignalOracleBot

Portal: <https://signal-bot-chi.vercel.app>

Features: BOTChain Network Hub & Multi-rail Payouts
